

CFR-3-03 Speedtype and chartfield structure

CFR-3-03.01 Introduction

The University's accounting system uses five PeopleSoft Chartfields to track and organize all financial transactions. Defined combinations of Chartfields are called Speedtypes.

CFR-3-03.02 Speedtypes

Speedtypes are six-digit numbers which provide control over data as well as convenience when accessing information. The first digit indicates the fund type. See chart in CFR-3-03.04 for the actual Speedtype ranges.

PeopleSoft records all information by the Chartfield combination and not the Speedtype. If the Chartfield combination changes for a Speedtype (for example, a change in home department), the old Chartfield combination will be recorded under the Speedtype with an additional modifier. Modifiers begin with -01 and continue through -99 (for example 2xxxxx-01). This allows for access to the historical Chartfield data.
