

This document will provide an overview of features in the **Quizzes** tool in Desire2Learn (D2L).

Quizzes Overview

The Quizzes tool can be used to deliver exams and quizzes in an online environment. A multitude of options and restrictions are available, e.g., questions can be delivered randomly, choices within questions can be delivered randomly, and time limits can be enforced.

The quizzes tool also contains a question library, which serves as a central storage location for all quiz questions that may be used in a course. Quiz questions can be created in the Question Library or imported from publisher test banks or test generation software. Many different question types are supported, including multiple choice, true/false, matching, fill-in-the-blank, and long answer.
