

Clearing Cache (Temporary Internet Files)

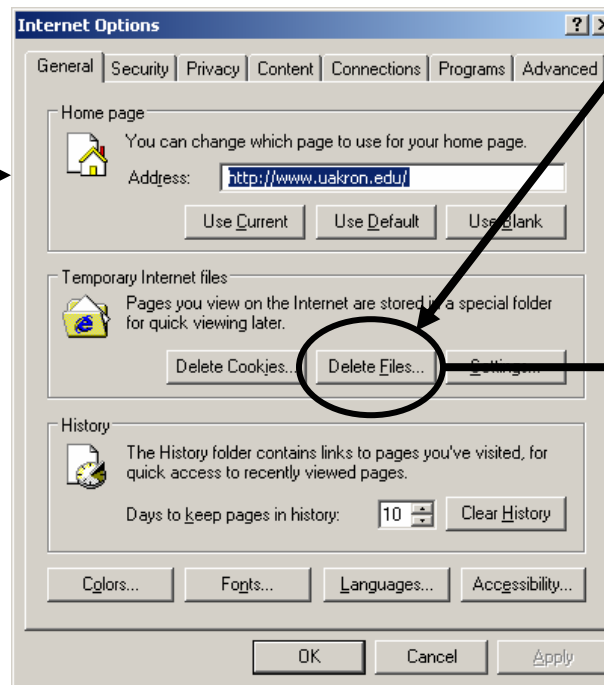

Temporary Internet Files folder (also referred to as Cache) contains web pages that you have recently opened. The web pages are copied to this folder so that if you open them again they will be displayed quicker. It is good practice to occasionally clear the cache especially if you find Internet Explorer getting interrupted or performing at a slower rate.

STEP 1

Open Internet Explorer

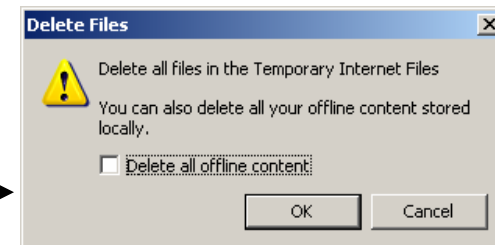

STEP 2

Select from the menu:
Tools, Internet Options

STEP 3

Click on the **Delete Files** button.

STEP 4

Place a checkmark in the **Delete all offline content** box, and select **OK**.

Note: This process may take several minutes to complete.
