Background

Established in 1992, The University of Akron Upward Bound Regional Math and Science Program is a unique effort to promote the pursuit of undergraduate mathematics and science education among high school students meeting program criteria. With a particular focus on polymer science, the program features 3 distinct components: a six-week summer residential program; a bridge program; and academic year activities. Believed to be the nation’s only pre-college polymer program, it takes advantage of Akron’s location in the heart of “Polymer Valley” and the state-of-the-art resources available in The University of Akron’s Polymer Science faculties.

Program Objective

- Students will maintain a cumulative G.P.A. of 2.75 or higher
- Students will achieve proficient level on state assessments
- Students will continue in high school each year and graduate from high school
- Students will complete a rigorous course of study in high school
- Students will enroll in college the fall semester immediately following high school graduation
- Students will graduate from college with an associates or bachelors degree

Who Can Participate?

Sixty-seven students who:
- Attend one of the high schools in Akron
- Are entering their freshman or sophomore year in high school.
- Have demonstrated interest in, or have the potential to enjoy and succeed in an accelerated math/science curriculum.
- Possess a level of maturity enabling them to live away from home for six weeks.
- Meet federal income and/or first generation college criteria (neither parent has earned a bachelor’s degree).

Why Study Polymers?

Seventy percent to eighty percent of everything we come into contact with daily has a basic polymeric structure. Polymers range from rubber and plastics to human hair, skin and muscles, computer chips, cotton, wood, Plexiglas, adhesives, lubricants, silk, DNA, and more. Currently polymers are the “hottest”, most researched materials in the world, the result of which is diverse career opportunities with high earning potential.

Program Cost

There is NO COST to qualified students for the six-week program. The program covers expenses for transportation to and from the program, dormitory housing, meals, field trips and cultural events, classes and course materials. In addition students receive stipends to pay miscellaneous expenses.

Achievements

- 70% college persistence rate of grad
- 95% of participants receive scholarships and/or financial aid for college
- 2008-2013 UBMS grant ranked in top 10% of those in USA
- Nationally recognized research project
- Featured on WKYC, Akron Beacon Journal
- Published in science textbook, journal articles and state and regional conferences.
