

## Mac Users: Absolute Manage Software Pushes

Absolute Manage is a new Software Deployment product being used by The University of Akron to push software to University-owned Macintosh computers. It will also be used to Push Apple Software Updates to these users.

In order to install software pushed to the Macintosh, simply:

1. Go to System Preferences
2. Click the Absolute Manage Preference Pane
3. Click on Software Updates.

The information in this window will show what software has been pushed to the Macintosh. The software in this list includes software that was **automatically pushed** to this machine along with the **On-Demand Software** that was installed.

### On-Demand

To see what **On-Demand Software** is advertised to the Macintosh click on Show On-Demand Software button like below. The Absolute Manage Software Distribution window will display the Software that is advertised to the machine and can be installed by simply selecting the checkbox next to the software title and pressing ok to install the software.

McAfee Endpoint Encryption ver. 6.2 should be listed. If it is not, please contact the Support Desk and have a ticket opened to get the software installed on your Macintosh.
