

## **Jaden Beachy**

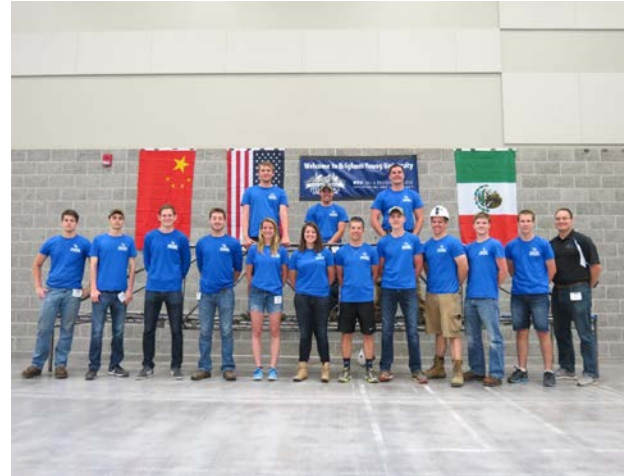

Civil Engineering

**Hometown:** Berlin, OH

**Student organizations:**

- Steel Bridge Team
- American Society of Civil Engineers

**Career after graduation:** AECOM in Akron, OH.

### **Why did I choose UA Civil Engineering?**

As a senior in high school I visited several different schools with a Civil Engineering major. I ended up choosing Akron for several reasons including the highly recommended Civil Engineering department and the student design teams. As a freshman I joined the steel bridge design team stayed on the team all 5 years that I attended the University. While on the team the three largest things that I learned were the value of networking, time management and not being afraid to ask for help. As an engineering student I quickly realized that the classes I was taking or going to take would not be easy. Luckily, I was surrounded by great friends, faculty and professionals who were always willing to work with me to develop an understanding of difficult topics. All I had to do was ask.

### **What is your typical day as an engineering student?**

My typical day as an engineering student has changed many times throughout my time here at UA. As an underclassman a lot of time was spent on campus studying with classmates and doing small things for the steel bridge team. As an upperclassman I started working part time for an engineering company, became captain of the steel bridge team and still spent a lot of time on campus studying.
