

Peter Radzialowski

Electrical Engineering

Hometown: Richfield, OH

Professional/Student Organizations:

- Institute for Leadership Advancement
- Global Leadership Initiative
- RooCatholic
- Students for Life

Aside from the College of Engineering, why UA?

UA was close to home and the program is good, and there are a bunch of cool student clubs to get involved with. I have had a particularly good experience at the Newman Center with RooCatholic. I have gone on 3 different service weeks (Cleveland, Cincinnati, and West Virginia) with RooCatholic, doing everything from volunteering in a foodbank and helping at a daycare to installing drywall, and landscaping work. I found a wonderful community to grow with, and if you refuse to settle for less, you could too.

Why did you choose Electrical Engineering?

Science and math have always appealed to me, and Electrical Engineering seemed like a fit since it has science, math, and black magic, which is pretty cool. On a real note though, it has been very difficult, but I am glad I decided to follow through. My housemates like to joke that my homework consists of inputs, a big black box, and outputs, but that's not really the truth. I have learned about all kinds of things in school, including the importance of emotional intelligence and networking, and have had many formative experiences on my co-op terms. Having any Engineering degree is an excellent springboard into most sectors of the market. The career flexibility and skillset are valuable not only to myself, but to recruiters as well.
