
ANS publications are chosen for their pioneering perspective and significance in contributing to the evolution of the discipline of nursing. Further, ANS is consistently ranked as one of the most-read and most assigned journals by faculties of graduate nursing programs. Mollohan’s concept analysis resulted in a definition of “dietary culture” that conceptualizes the term within the context of diet, culture and cardiovascular health. This publication is preliminary work for her dissertation, which will describe the process of transitioning to plant-based diets in adults with cardiovascular disease. Please join us in congratulating Elise for her good work.
