

Main Campus VPN Installation Instructions

Overview

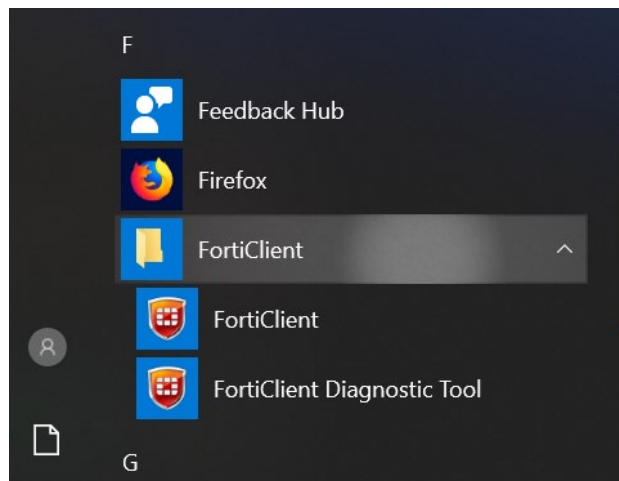

This document describes the procedure for setting up and connecting to main campus virtual private network (VPN) on a privately owned machine. On a UA-owned computer, it should already be installed and configured. Please reach out to help desk if it's not already installed.

The Forticlient VPN client can be downloaded from the following link. Please download and install it, and then proceed to the configuration steps below.

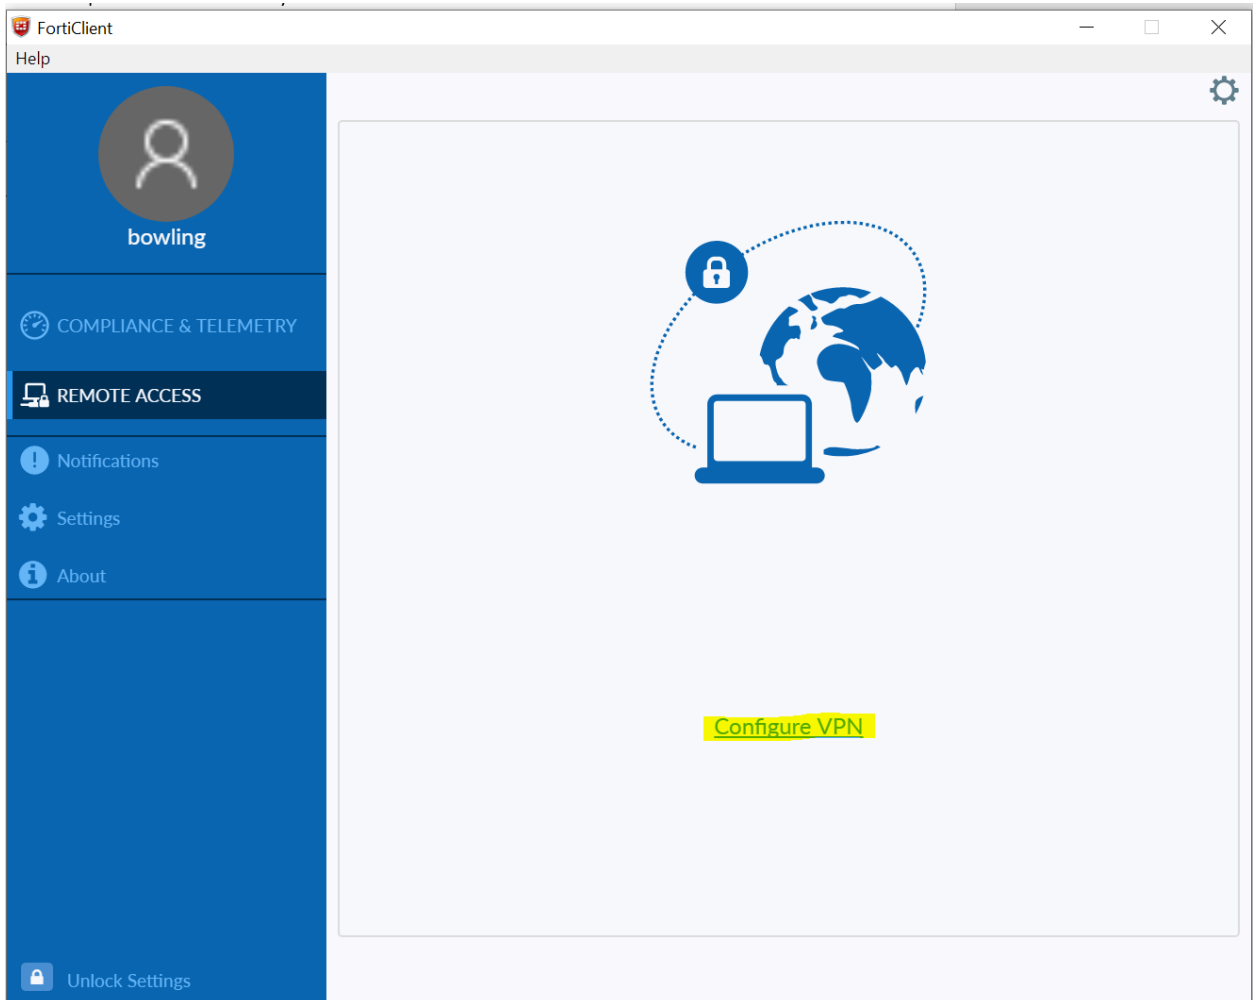

<https://www.forticlient.com/downloads>

Configuration Procedure

- 1) Open the Forticlient console from the start menu.

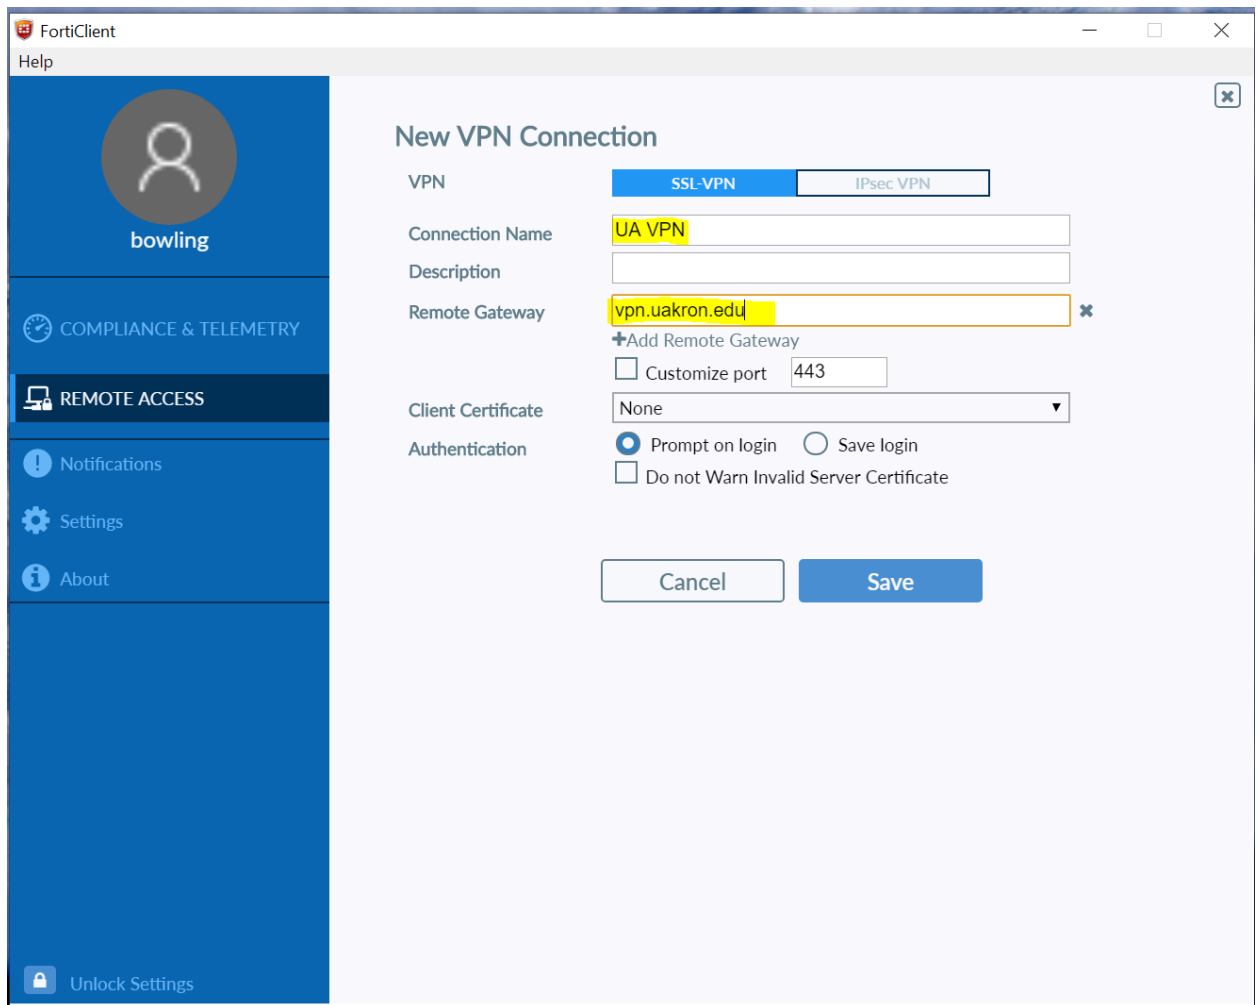

2) Click the “Configuration VPN” link, highlighted in the screen capture below.

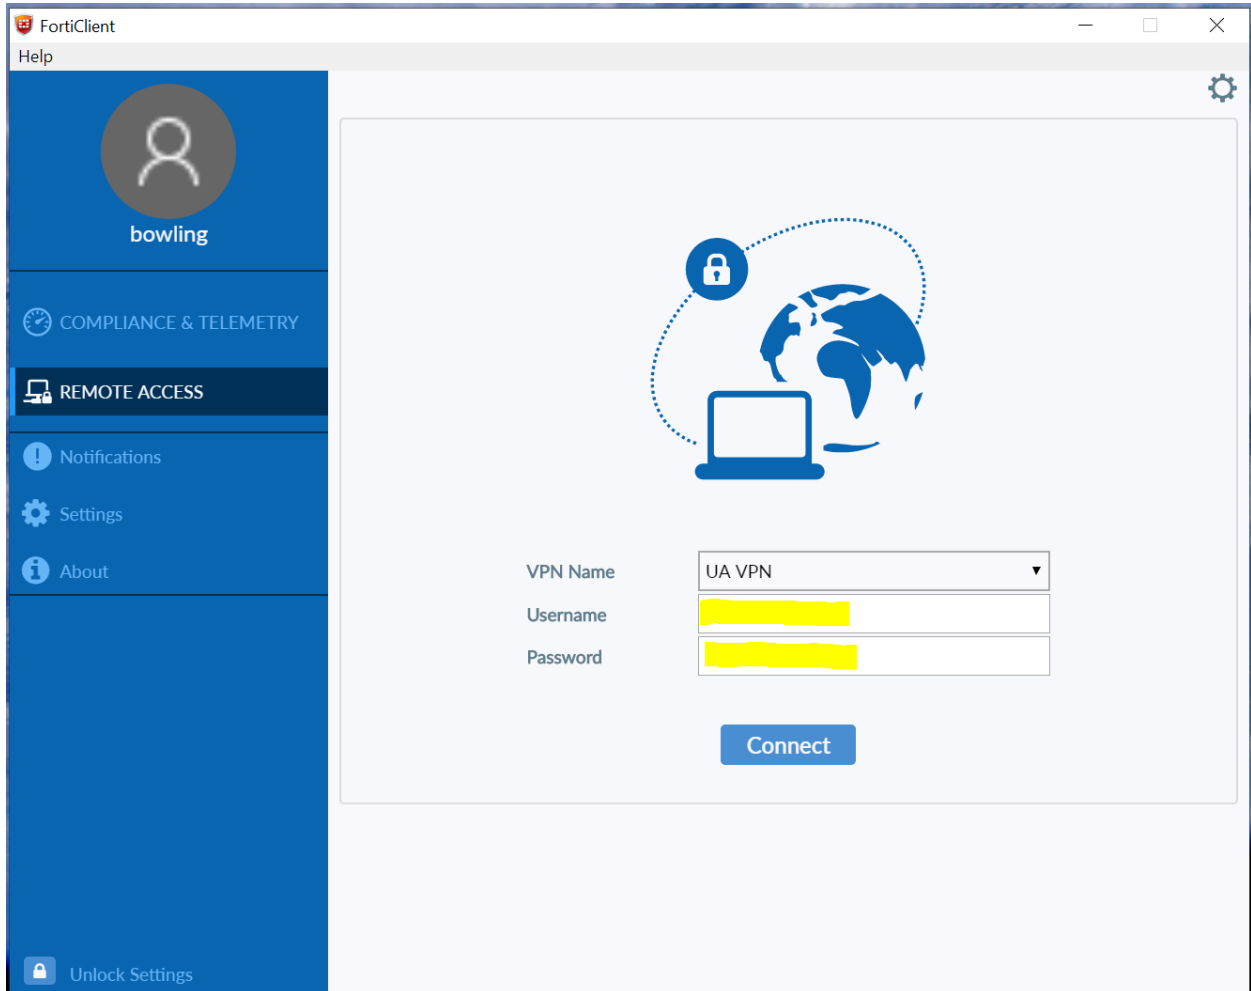

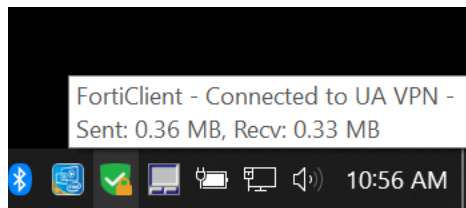

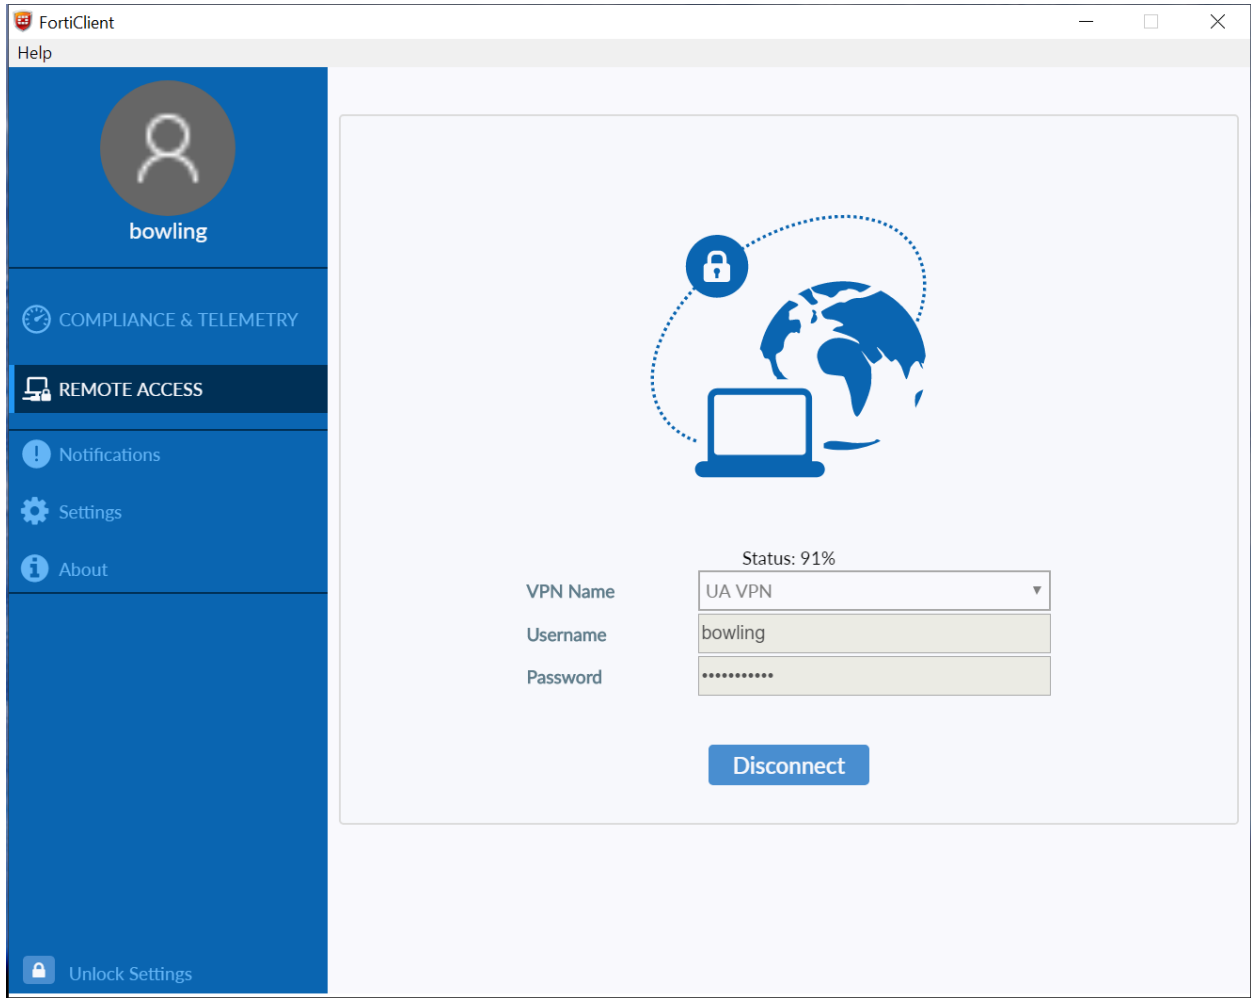

- 3) Create a new SSL VPN connection profile, as shown below, pointing at the remote gateway “vpn.uakron.edu”

Highlighted fields are what you need to edit. All other values can be left at default. Click the Save button.

- 4) Connect to the new profile using your UANET credentials. After a short delay, the Forticlient Console should minimize to a green shield icon

5) When you are ready to disconnect, right click the shield icon and select the Disconnect option.
