

Content

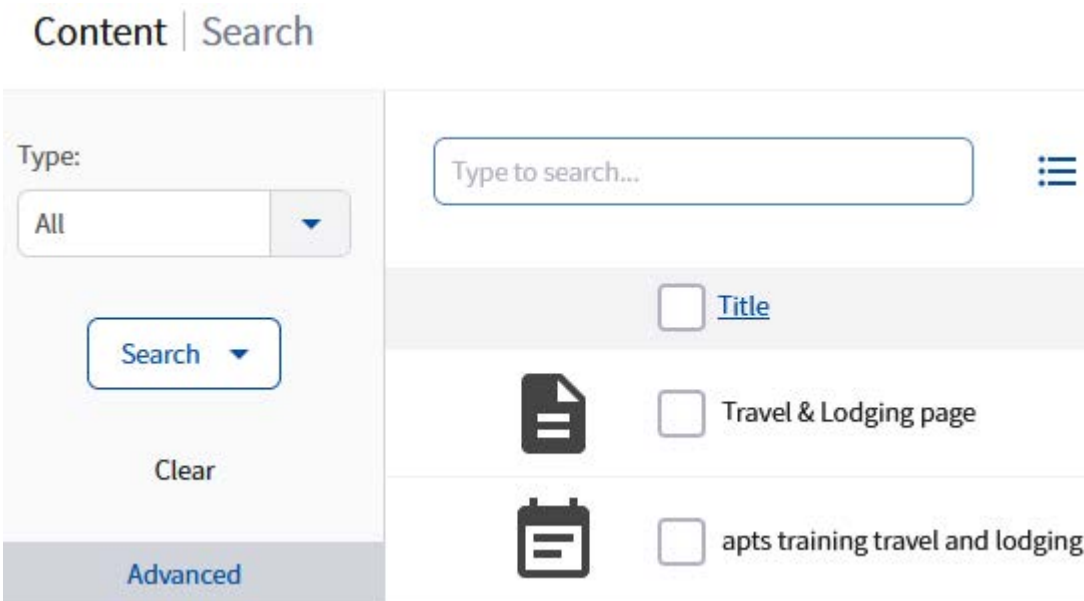

Content in dotCMS is what we add to webpages. This might be text, tables, links – or specialized content that pulls information together like a list of academic programs or employees in a department.

To edit content, log into dotCMS and open the menu.

Click on Content, then Search

You will see a listing of the most recently edited items – along with a search box.

Your search will look through the 10,000+ items in dotCMS - including Pages and Documents. Clicking on the title for the item will take you into an Edit Mode where you can make changes you need.

Note:

A piece of content – like *office hours* – might “live” on multiple pages on the website. Make sure this is the content you want to change before making your edits.
