Biomimicry Fellowships in Integrated Bioscience 2012

Earn a PhD, become an innovation leader and advance the discipline of Biomimicry

Humans have a long history of taking inspiration from nature to find extraordinary solutions to intractable or new challenges. Biomimicry is an emerging discipline that is now formalizing this approach. The University of Akron and Cleveland Institute of Art, in cooperation with the Biomimicry Institute and the Great Lakes Biomimicry Collaborative are offering the first of its kind PhD training in Biomimicry. Take advantage of this opportunity to help shape a new field that is revolutionizing the way we think about nature, society and technology.

Who are the fellowships for?
Applicants to the Integrated Bioscience PhD Program at the University of Akron

What kind of background do I need?
A bachelors degree (including but not limited to one of the following: science, engineering, design, business or law) from an accredited college or university, and the experience and desire to work in a dynamic interdisciplinary environment that blends design, biology and business to discover and apply the principles of living systems to human centered problems.

Information and Application?
Peter H. Niewiarowski PhD
Biology and Integrated Bioscience
