Responsive Images

A responsive image will adjust and resize along with the page to better fit the screen size.

To make your image responsive, follow these steps:

1. Edit the content where you want the image to appear.
2. Click the Image button and Browse to find the image you want to use.
3. Add in an Image Description
4. Click Insert to add the image to your content.
5. Click the HTML button to bring up the HTML Source Editor

You’ll see some code that looks something like this:

```
<p><img src="/dotAsset/1173496.jpg" width="300" height="227" alt="Bios" /></p>
```

Add in a new class:

```
class="img-responsive"
```

to the image, like this:

```
<p><img class="img-responsive" src="/dotAsset/1173496.jpg" width="300" height="227" alt="Bios" /></p>
```

6. Click Update to return to the content. Your image is now responsive.

Extra Design Options:

If you would like rounded corners on your image, you can add to the class like this:

```
<p><img class="img-responsive img-rounded" src="/dotAsset/1173496.jpg" width="300" height="227" alt="Bios" /></p>
```
